

Christopher Fahey

Software Engineer | 7+ years experience | Java • Python • SQL • React • Typescript • AWS • Cloudflare • AI

chrisfahey1010@gmail.com • (612) 940-8038 • github.com/chrisfahey1010

Education	University of Wisconsin B.S. Computer Science & Information Systems	River Falls, WI <i>Cum Laude</i>
Software Experience	<i>Red Sky Security</i> AI Engineer - Sales - Built an AI-driven sales pipeline to modernize a legacy prospecting model, using agentic harnesses for automated market research, account targeting, and sales routes - Designed and deployed custom CRM-integrated outreach workflows that generate prospect-specific emails aligned to client pain points and our service offerings - Leveraged GPT Codex, Claude, and Gemini for contractual analysis, comparing indemnity language against competitors to keep our practices industry-standard - Outperformed existing sales team in the first month by combining AI-powered research and automation to identify valuable opportunities and close more business faster <i>Diljohn, LLC</i> Full Stack Engineer - Developed AWS-native web applications for local businesses - Built automated pipelines for video generation using Sora, Hailuo, and ChatGPT - Produced high fidelity marketing videos using real-world photography augmented by AI - Designed and implemented unified company branding across our web presence <i>Metabolon</i> Software Development Engineer - Enhanced LabVantage LIMS user experience with features from new pipeline (Java) - Deployed core services to production environments (Docker / Azure / CI/CD) - Refactored validation software for lab equipment, improving accuracy (Python) - Implemented database redesign for improved lab sample tracking (SQL) - Built and tested REST API endpoints for core services (C# / Python / Bash) <i>TCP Software</i> Software Engineer II - Optimized server-side performance, reducing load time 90% for enterprise clients (PHP) - Led small team refactor of a legacy backend module resulting in better SoC, full test coverage, legacy bug fixes, and full documentation (Project Management) - Built automated tests to detect data corruption during deployments (SQL) <i>VR Rehab</i> Software Engineer - Developed tactical software for Windows and Android (C# / Unity3D) - Wrote applications parsing realtime GPS data from drone hardware (GIS / Python) - Created terrain maps for flight simulator demos, securing DoD project funding (ArcGIS) - Built a small robot prototype for DoD smart ordnance project (Robotics)	Tacoma, WA Feb 2026 – June 2026 Tacoma, WA June 2024 – Feb 2026 Morrisville, NC (<i>Remote</i>) Dec 2022 – June 2024 River Falls, WI May 2020 – May 2022 Clermont, FL (<i>Remote</i>) Aug 2016 – Apr 2017

LiveNapalm Media

Tacoma, WA

Photographer

April 2023 – Feb 2026

- Professional photographer documenting the heavy metal scene in the Pacific Northwest
- Photographs published by *Decibel* and *Metal Injection*

AmpliFi Loyalty Solutions

Naperville, IL

Software Developer Intern

May 2019 – Aug 2019

- Developed updates for a SaaS financial rewards web app (**JavaScript / Java Spring**)
- Cleared a year of tech debt in one month via testing (**JUnit**), algorithm simplification (**Java / C#**), and **SQL** validation

Embry-Riddle Aeronautical University

Daytona Beach, FL

Software Developer

Nov 2014 – May 2017

- Developed research applications for Human Factors studies that were published in peer-reviewed journals and presented in-person at research conferences (**MATLAB**)
- Designed simulations in Arma 3 for published studies researching team performance

Projects

Personal Website

fahey.vip

Designed and built a static-first personal portfolio platform with Astro, TypeScript, and **Cloudflare** Pages, creating a structured content architecture, friendly UX, SEO support, accessibility guardrails, and Node-based regression tests backed by CI/CD. I used the BMAD planning workflow to drive the project from product requirements, and I incorporated AI-assisted development with **OpenCode**, **llama.cpp**, Cursor, and Codex to accelerate delivery, improve decision quality, and demonstrate a modern, agent-enabled engineering workflow.

LiveNapalm Website

livenapalm.com

Built and migrated a modern concert photography portfolio with Next.js, **React**, TypeScript, and Tailwind CSS, statically exporting a responsive gallery to Cloudflare Workers. Designed a markdown-based content system that combines authored photo posts with a checked-in Flickr album manifest, dynamic sitemap/metadata support, lazy-loaded image grids, keyboard/touch photo navigation, EXIF display plumbing, and an accessible mobile-first UI.

Castaway Fishing

castawayfishing.net

Built and rapidly deployed a browser-based fishing game with TypeScript, Vite, and BabylonJS, using frontier AI tools including OpenCode and **Hermes** within **VS Code** to accelerate implementation while manually driving playtesting, gameplay tuning, system simplification, and **creative direction**. Features include dynamic water biomes, physics-based reeling, weighted fish spawning, dozens of species, progression unlocks, responsive desktop/mobile controls, and client-side autosave. Deployed to Cloudflare Pages with CI/CD via GitHub.

Publication

Combat Identification in Mixed Gender Teams

Co-Author

Proceedings of the HFES 2017 Annual Meeting, Sept. 2017, pp. 2005 - 2009

Co-authored and published a research paper analyzing the effects of team gender composition on ability to identify combat vehicles. I developed research assessment applications using MATLAB, created virtual training environments in Arma 3, and individually trained human participants on armored vehicle aesthetics.
