

Christopher Fahey

Software Engineer | 7+ years experience | Java • AI • SQL • Python • React • PHP • Cloudflare • AWS

chrisfahey1010@gmail.com • (612) 940-8038 • github.com/chrisfahey1010

Education	University of Wisconsin B.S. Computer Science & Information Systems	River Falls, WI <i>Cum Laude</i>
Software Experience	<i>Red Sky Security</i> AI Engineer - Sales	Tacoma, WA Feb 2026 – Present
	- Built an AI-driven sales pipeline to modernize a legacy prospecting model, using agentic harnesses for automated market research, account targeting, and sales routes - Designed and deployed custom CRM-integrated outreach workflows that generate prospect-specific emails aligned to client pain points and our service offerings - Leveraged GPT Codex, Claude, and Gemini for contractual analysis, comparing indemnity language against competitors to keep our practices industry-standard - Outperformed existing sales team in the first month by combining AI-powered research and automation to identify valuable opportunities and close more business faster	
	<i>Diljohn, LLC</i> Full Stack Engineer	Tacoma, WA June 2024 – Feb 2026
	- Developed AWS-native web applications for local businesses - Built automated pipelines for video generation using Sora, Hailuo, and ChatGPT - Produced high fidelity marketing videos using real-world photography augmented by AI - Designed and implemented unified company branding across our web presence	
	<i>Metabolon</i> Software Development Engineer	Morrisville, NC (<i>Remote</i>) Dec 2022 – June 2024
	- Enhanced LabVantage LIMS user experience with features from new pipeline (Java) - Deployed core services to production environments (Docker / Azure / CI/CD) - Refactored validation software for lab equipment, improving accuracy (Python) - Implemented database redesign for improved lab sample tracking (SQL) - Built and tested REST API endpoints for core services (C# / Python / Bash)	
	<i>TCP Software</i> Software Engineer II	River Falls, WI May 2020 – May 2022
	- Optimized server-side performance, reducing load time 90% for enterprise clients (PHP) - Led small team refactor of a legacy backend module resulting in better SoC, full test coverage, legacy bug fixes, and full documentation (Project Management) - Built automated tests to detect data corruption during deployments (SQL)	
	<i>VR Rehab</i> Software Engineer	Clermont, FL (<i>Remote</i>) Aug 2016 – Apr 2017
	- Developed tactical software for Windows and Android (C# / Unity3D) - Wrote applications parsing realtime GPS data from drone hardware (GIS / Python) - Created terrain maps for flight simulator demos, securing DoD project funding (ArcGIS) - Built a small robot prototype for DoD smart ordnance project (Robotics)	

LiveNapalm Media

Tacoma, WA

Full Stack Developer & Photographer

April 2023 – Feb 2026

- Developed and maintain an open source, high-performance photography portfolio website using **Next.js**, **React**, and **TypeScript**, featuring server-side image optimization
- Architected and deployed cloud-native infrastructure using **AWS** services (**Amplify**, **S3**, **CloudFront**, **Route 53**), implementing a global CDN for optimized image delivery
- Engineered responsive, mobile-first UI with **Tailwind CSS**, implementing touch gestures, keyboard navigation, and accessibility features for an enhanced user experience
- Implemented advanced image optimization and delivery system using **AWS S3**, featuring dynamic image loading, EXIF extraction, and performance-optimized image sizing
- Integrated SEO best practices including dynamic sitemap generation, meta tags, and **OpenGraph** support to improve search engine visibility
- Photographs published by *Decibel* and *Metal Injection*

AmpliFi Loyalty Solutions

Naperville, IL

Software Developer Intern

May 2019 – Aug 2019

- Developed updates for a SaaS financial rewards web app (**JavaScript** / **Java Spring**)
- Cleared a year of tech debt in one month via testing (**JUnit**), algorithm simplification (**Java** / **C#**), and **SQL** validation

Embry-Riddle Aeronautical University

Daytona Beach, FL

Software Developer

Nov 2014 – May 2017

- Developed research applications for Human Factors studies that were published in peer-reviewed journals and presented in-person at research conferences (**MATLAB**)
- Designed simulations in Arma 3 for published studies researching team performance

Projects

Personal Website - www.fahey.vip

Principal Engineer

Designed and built a static-first personal portfolio platform with Astro, TypeScript, and **Cloudflare** Pages, creating a structured content architecture, friendly UX, SEO support, accessibility guardrails, and Node-based regression tests backed by CI/CD. I used the BMAD planning workflow to drive the project from product requirements, and I incorporated AI-assisted development with **OpenCode**, **vLLM**, Cursor, and Codex to accelerate delivery, improve decision quality, and demonstrate a modern, agent-enabled engineering workflow.

Castaway Fishing - www.castawayfishing.net

Principal Engineer

Built and rapidly deployed a browser-based fishing game with TypeScript, Vite, and BabylonJS, using frontier AI tools including OpenCode and **Hermes** within **VS Code** to accelerate implementation while manually driving playtesting, gameplay tuning, system simplification, and **creative direction**. Features include dynamic water biomes, physics-based reeling, weighted fish spawning, dozens of species, progression unlocks, responsive desktop/mobile controls, and client-side autosave. Deployed to Cloudflare Pages with CI/CD via GitHub.

Publication

Combat Identification in Mixed Gender Teams

Co-Author

Proceedings of the HFES 2017 Annual Meeting, Sept. 2017, pp. 2005 - 2009

Co-authored and published a research paper analyzing the effects of team gender composition on ability to identify combat vehicles. I developed research assessment applications using MATLAB, created virtual training environments in Arma 3, and individually trained human participants on armored vehicle aesthetics.
